Please insert the following Abstract:

Abstract of the Disclosure

Heparin-binding peptides are provided of the formula $R_1(X_1B_1B_2X_2B_3X_3Y_1R_2)_nR_3$, $R_1(X_1B_1B_2B_3X_2X_3B_4X_4Y_1R_2)_nR_3$, and $C(X_1B_1B_2B_3X_2X_3B_4X_4)_nC$; wherein X_1 , X_2 , X_3 , and X_4 are independently selected from the group consisting of hydropathic amino acids; B_1 , B_2 , B_3 , and B_4 are independently selected from the group consisting of basic amino acids; C is cysteine; Y_1 is zero or one to ten amino acid residues, wherein at least one amino acid residue is proline; C is an integer from one to ten; and C and C are independently selected segments containing from zero to twenty amino acid residues, provided, at least one of the segments C and C are independently selected segments C and C are independently selected segments. The peptides are also administered to inhibit microbial growth and to inhibit mast cell serine proteases involved in various diseases and disorders. The peptides are also administered as carriers to deliver active agents.
